Table 4: Notes to be taken into account about sample size in the first study for signed up students

	code	description
Interest/Enjoyment	WARN: sample.size	current size is 14 and recommended size is 15 for the group: 'non-gamified:Apprentice'.
Perceived Choice	WARN: sample.size	current size is 14 and recommended size is 15 for the group: 'non-gamified:Apprentice'.
Pressure/Tension	WARN: sample.size	current size is 14 and recommended size is 15 for the group: 'non-gamified:Apprentice'.
Effort/Importance	WARN: sample.size	current size is 14 and recommended size is 15 for the group: 'non-gamified:Apprentice'.
Intrinsic Motivation	WARN: sample.size	current size is 14 and recommended size is 15 for the group: 'non-gamified:Apprentice'.

Recent studies carried out through simulations have indicated that ANOVA is reliable even when the data are non-normally distributed and the sample size is greater than 15 observations for each group. This size value is based on the Reference: Rana, R. K., Singhal, R., & Dua, P. (2016). Deciphering the dilemma of parametric and nonparametric tests. Journal of the Practice of Cardiovascular Sciences, 2(2), 95.

The sample size to carried out any parametric and non-parametric analysis is 5, and it was established using common sense. The warning and fails indicated in this section should be taking into account when a paper or report will be elaborated.
